

Laying a filigree floor / Photo Documentation

With our help, you can learn how to build it yourself. Quality starts with careful preparation. It is better to invest a little more time for quality and safety than cause damage. Any damage, whether material or human, costs you money.

Set the ceiling supports, along with the heads and feet. Mount the wooden beams and align to the height.

Mount the ceiling to the mobile crane or tower crane, install and align according to the plan.

Add additional reinforcement on the filigree slabs. Install steel beams and if necessary weld. Cut, lay, and tie the upper suspension. Attach the slab-edge. Static acceptance by the engineers and concreting.
